University of Hawaii Community Colleges
Proposal to Initiate, Modify or Delete a Course
New Course Proposal Form – Go to next page for Course Modification)

WCC Form for New Course Proposals
(This sheet was originally pink.)

1. How is this course related to the education needs and goals of the College/Department/Community as reflected in the EDP/ADP?

   The department is tasked to provide a physical science requirement for the liberal arts students. This laboratory course will provide reinforcement for students of the General Physics II course (Phys 272). These students are seeking more scientifically oriented careers, such as physics, astronomy, or engineering.

2. Provide details of any additional staff, equipment, facilities, library/media material, faculty preparation and other financial support that would be required to implement this course. (Include an estimate of the actual cost of supplies and equipment.) What has been done to provide for these additional costs for the proposed date of offering? Who will teach the course?

   An additional instructor will be required. The equipment and facilities are identical to those used in the current physics 151L course.

3. Is a similar course taught elsewhere in the UH system? Yes If yes, provide details of how this course differs from existing similar courses.

   This course, as proposed, is taught elsewhere in the UH system with no differences.

4. Is this course experimental and/or unique to Windward Community College? No If yes, provide rationale and details of its impact on the College Curriculum

5. Is a similar course taught in the upper division level by a 4-year UH college? No If yes, explain why this course is appropriate at the lower division or how it differs from its upper division counterpart.

6. Please attach a complete course outline. Your course outline should address all the items listed in the Guidelines for Course Outlines.

7. If this course is numbered 100 or above or appropriate for transfer to a 4-year college, complete and attach WCC Form for Transfer Courses (blue). See criteria for transfer courses.
WCC Form for Transfer Courses
(To be completed for articulation with any 4-year UH campus)
(This sheet was originally blue.)

Course Alpha and Number Physics 272 General Physics II Laboratory

Submitted by J. Hudson/J. Ciotti

Date March 3, 2004

1. List the counterpart to this course on any 4-year UH campus. Describe the relationship between the course any related baccalaureate program area.

   This is the second of a rigorous, calculus based, laboratory course for professional or engineering majors. The study of the concepts of physics including the fundamental principles and theories of electricity, magnetism, light, and optics, with an emphasis on problem solving. As such, any quantitative science major could make use of this course to fulfill a Natural Science requirement. This course is referred to as Physics 272L General Physics II Laboratory at UH Manoa.

2. Is this course taught or accepted by major accredited colleges or universities? Give one or two examples.

   Yes. Georgetown University

3. Please attach a complete course outline if you have not done so already. Your course outline should address all the items listed in the Guidelines for Course Outlines.

Articulation with 4-year UH Campus Form  

COURSE ARTICULATION FORM (GENERAL EDUCATION CORE)  

ORIGINATING CAMPUS: Windward Community College  
DATE SUBMITTED: December 11, 2003  

COURSE ALPHA & NUMBER: Physics 272L  
SEMESTER CREDITS: 1  

COURSE TITLE: General Physics II Laboratory  
DATE OF OUTLINE: December 11, 2003  

(** Representative outline, no multiple syllabi, please.)  

1. Articulation committee to review this course:  
   Standing Committees  
   Written Communication  
   Mathematical & Logical Thinking  
   World Civilizations  
   Languages  
   Arts & Humanities  
   Natural Science  
   Social Science  

2. The information in this item is required by the reviewing committee so that it has a starting point for reviewing the course. It is the responsibility of the submitting campus to do the necessary research to provide this information.  

In the opinion of the originating campus, this course is equivalent to the following and/or meets the criteria for the indicated core categories. Every core category space, except your own campus, must be filled in (can include ‘none’). An equivalent course, if known, may be helpful to committee members but is not required.

3. If submitted electronically, I understand that this outline will be posted to a publicly accessible web site to enable open access for reviewing committees and campuses. The outline will be taken off the site upon completion of the review.  

Typed Name or Signature  

Note: If possible submit coversheet and course outline electronically as e-mail attachments (preferably in ‘pdf’ format). If submitting in printed form, 20 copies of coversheet and course outline are required for distribution for appropriate review.  

Note: UCA Clearinghouse  
John Muth, Office of the Chancellor for Community Colleges, is acting as staff to the University Council on Articulation and is responsible for tracking all courses submitted for articulation.
COURSE OUTLINE

COURSE/CATALOG DESCRIPTION
Physics 272L/ This laboratory course is a rigorous, calculus based study for professional or engineering majors. Laboratory exercises are designed to reinforce the fundamental concepts of electricity, magnetism, light, and optics.

COURSE NAME
General Physics II Laboratory

COURSE ALPHA
Physics 272L

CREDIT/CONTACT HOURS
1 credit/3 contact hours

PREREQUISITES REQUIRED
Math 206

CO-REQUISITES
Concurrent registration, or credit in Physics 272

RECOMMENDED PREPARATION AND BASIC SKILLS
This is a general physics laboratory with an emphasis on problem solving and data taking. The student should understand algebra, trigonometry, and analytic geometry, as well as to be able to perform basic differentiation and integration.

If the course involves the use of mathematics, indicate the level of quantitative reasoning required.

SPECIFIC COURSE OBJECTIVES
Upon successful completion of PHYS 272L, the student should be able to:
- demonstrate an understanding of some of the basic physical concepts and theories as pertains to electricity, magnetism, light, and optics.
- demonstrate familiarity with various instruments to make reliable and precise measurements
- calculate a result with the appropriate number of significant figures
- analyze data through calculation and plotting graphs
- keep an accurate and complete laboratory notebook.

What knowledge and/or skills will successful completion of the course develop in the student?

METHOD OF INSTRUCTION
Each laboratory session begins with a lecture. The physical concept to be reinforced by the particular experiment is discussed. The methods for obtaining
necessary data, desired results and outcomes, as well as instrument usage are covered. After the lecture, the students will have the remainder of the class session to perform the experiment, obtain the data, and derive the results.

COURSE CONTENT AND APPROXIMATE TIME TO BE SPENT ON EACH TOPIC

One laboratory session for each of the following topics:
- Introduction: Fields and Potentials
- Oscilloscope
- DC Circuits
- Electric Field Mapping
- Electric Deflections
- Capacitors
- Magnetic Field Mapping
- Magnetic Deflections
- Induction
- LRC: Natural Oscillations
- LRC: Driven Oscillations
- Refraction of Light
- Geometric Optics

A proposed semester schedule is acceptable.

TEXT(S)
- General Physics Laboratory II: Electricity and Magnetism
- Physics 152L and 272L
- F. A. Harris; Kendall/Hunt Publishing Co.

List text(s) to be used and reading level of text. Contact Learning Skills Center to determine reading level. List text(s) to be used. If there is no text, so state. Indicate approximate percentage of text to be used if less than 75 percent.

REFERENCE AND SUPPLEMENTARY MATERIALS
- A scientific calculator, a protractor, and a quadrille notebook (which is to act as a laboratory notebook).

List materials that may be found in the library that will contribute to the course.

COURSE REQUIREMENTS
- Attendance and participation are required for all laboratory sessions. Students must come to class prepared to conduct the exercises described in the reading. Periodically, quizzes will be given at the beginning of some of the lab sessions to verify student preparation.

List any projects, field trips, experiments, reports, independent work, etc., which will be required or expected of students for the course.

EVALUATION
- The final grade will be determined by a cumulative point total at the end of the semester based on the following:
Laboratory Notebook  50% - This is one of the most important tools used by the experimentalist. All original data, any preliminary calculations and answers to lab questions, as well as any other pertinent observations are to be in this book. The lab notebooks will be collected periodically throughout the semester.

Pre-Lab Quizzes  10%

Post Lab Questions  40% - These take the part of industrial progress reports, and indicate the students understanding of the nature of the experiment that was performed. These are collected sometime during the lab session following the session that data was obtained to answer the questions.

The following scale will be used to determine the final grade;

<table>
<thead>
<tr>
<th>Grade</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>90 - 100%</td>
</tr>
<tr>
<td>B</td>
<td>80 - 90%</td>
</tr>
<tr>
<td>C</td>
<td>65 - 80%</td>
</tr>
<tr>
<td>D</td>
<td>55 - 65%</td>
</tr>
<tr>
<td>F</td>
<td>&lt; 55%</td>
</tr>
</tbody>
</table>

*Identify methods of evaluation which will be employed to determine if the course objectives are being met (e.g., written examinations, attendance, projects). Specify the grading procedure to be used in the course.*
Physics 272L
General Physics Lab II

Instructor: [Name]
Lab Time: [Time]
Office: [Location]
Office hours: [Hours]
Telephone: [Number]
e-mail: [Email]

Text: General Physics Laboratory II: Electricity and Magnetism
Physics 152L and 272L
F. A. Harris; Kendall/Hunt Publishing Co.

Materials: A simple calculator (non QWERTY type), a protractor, and a quadrille notebook (which will be your laboratory notebook) are required. Obviously, you will also need something to write with.

Course Description: This laboratory course is a rigorous, calculus based study of electricity, magnetism, optics, and modern physics with an emphasis on data taking and analysis.

Course Goals: The student upon successful completion of this course should:
- demonstrate experimental understanding of some basic physical concepts and theories.
- demonstrate familiarity with various instruments and learn to make reliable measurements.
- calculate a result with the appropriate number of significant figures.
- analyze data using calculation and graphical methods.
- keep an accurate and complete laboratory notebook.

Course Rules: Attendance and participation are required in all laboratory sessions. Students must come to class prepared to conduct the exercises described in the reading assignment. Periodically, quizzes will be given at the beginning of some labs to verify lab preparation. If missed, these quizzes cannot be made up. In the event that the student faces a medical emergency preventing them from completing one of the scheduled laboratory exercises, then an appointment for a make-up assignment must be scheduled with the instructor within 24 hours of the missed exercise. Documentation of the medical emergency must be presented before commencement of the make-up exercise.

Grading: The final grade will be determined by a cumulative point total at the end of the semester based on the following:
Laboratory Notebook 50% - This is one of the most important tools used by the experimentalist. All original data, any preliminary calculations and answers to lab questions, as well as any other pertinent observations are to be in this book. By its very nature, the notebook is not expected to be neat, but it is expected to be organized. The lab notebooks will be collected throughout the semester.

Pre-lab Quizzes 10% - As has been already stated, these are to test pre-lab preparedness.

Post lab Questions 40% - These take the part of industrial progress reports, and indicate the students understanding of the nature of the experiment that has been preformed. These are collected sometime during the next lab session.

The following scale will be used to determine the final grades;

- **A** 90 - 100%
- **B** 80 - 89%
- **C** 65 - 79%
- **D** 55 - 64%
- **F** < 50%

**Lab Schedule: (Tentative)**
