EFFECTIVE DATE: Spring 2017

Windward Community College Mission Statement
Windward Community College offers innovative programs in the arts and sciences and opportunities to gain knowledge and understanding of Hawai‘i and its unique heritage. With a special commitment to support the access and educational needs of Native Hawaiians, we provide O‘ahu’s Ko‘olau region and beyond with liberal arts, career and lifelong learning in a supportive and challenging environment—inspiring students to excellence.

Disabilities Accommodation Statement
If you have a physical, sensory, health, cognitive, or mental health disability that could limit your ability to fully participate in this class, you are encouraged to contact the Disability Specialist Counselor to discuss reasonable accommodations that will help you succeed in this class. Ann Lemke can be reached at 235-7448, lemke@hawaii.edu, or you may stop by Hale ‘Akoakoa 213 for more information.

Catalog Description
MATH 82 covers elementary algebra topics. Topics include linear equations and inequalities, graphing, linear systems, properties of exponents, operations on polynomials, factoring, rational and radical expressions and equations, quadratic equations, and applications. (4 hours lecture). Pre-Requisite(s): Satisfactory Placement, or a Grade of "C" or better in Math 21, Math 21B, Math 24, Math 28, or Math 75X.

Activities Required at Scheduled Times Other Than Class Times
Activities may include completion of library sections, conferences, TLC lab work, or any activity that the student must complete outside of regularly scheduled class time.

STUDENT LEARNING OUTCOMES

Students will be able to:
1. Use algebraic techniques to analyze and solve applied problems
2. Graph linear and quadratic equations
3. Solve equations, inequalities, and systems
4. Utilize precise mathematical language and symbols to effectively communicate mathematics in written and/or oral form

Note: All SLOs assessments are embedded in class activities, homework, quizzes, or Exams.
Course Tasks

The mode of instruction is primarily discussion-problem solving where the initial portion of each class period may be utilized to discuss and clarify any questions from the preceding class meeting and/or assignment, and the remaining portion is used to discuss new material. Lectures, directed student explorations, group work, appropriate technologies, and projects will also be used as appropriate. After the completion of each unit, a review and exam will be conducted.

Assessment Tasks and Grading

The student will demonstrate competency in the objectives by participating in and completing all class activities, by completing and turning in all assignments as requested, by taking unit tests, and by taking a final exam over concepts and skill covered in the entire course. Class activities, unit tests, and the final exam are to be taken in the classroom and without any references unless otherwise stipulated by the instructor.

It is the student’s responsibility to obtain and complete all assignments that are given in any class meeting for which the student is unable to attend. Unless permission is granted by the instructor beforehand, assignments and tests must be completed and submitted to the instructor at the specified date and time.

Points will be assigned to each graded assignment, class activity, and tests as follows:

1. Homework. Homework sets will be assigned through MyMathLab (registration directions at the end of this syllabus). Completed homework assignments are worth up to 2 points and are graded on completeness. Homework assigned during any given week will be due at the first class meeting on the following week; typically this will be on a Tuesday. You are encouraged to write out problems and show your work to make it more useful to study with and easier for myself or others to help with errors. **Graded Homework.** Occasionally a short homework set of about 3 or 4 problems may be assigned to be graded more critically. Clarity of thought process will be important to earn the full 2 or 3 points per problem, depending on the problem (i.e. show your work, write out your thought process and present your work in a neat and organized manner).

2. Class Activity. Class activities are done in class only. Class activities will be graded on a 0 - 3 point scale. There is no make-up for a missed class activity. Students must be present in class to participate.

3. Unit Exam. The five unit exams are given in class at the end of each unit. A Unit Exam will be 75 minutes in length and will be scored on a 100-point scale. The student must achieve a minimum of 70% of the possible points for each unit test. Without this minimum requirement, a passing grade for the course is not possible.

Note: A completed Unit Exam Review Assignment is the best way to prepare for the test at the end of each unit. The assigned Unit Exam Review Assignment must be completed and turned in to the instructor in order to sit for the Unit Exam. The completed Unit Exam Review Assignment is your “ticket” to take the Unit Exam! If the Unit Exam Review Assignment is not completed or not turned in, a score of 0 will be recorded for the Unit Exam. In this case, the student will have only the retest opportunity to earn a passing grade for this Unit Exam.
Retests. After each Unit Exam, a Retest Deadline will be given. One Retest is allowed without penalty for each module test if it is done by the specified Unit Retest Deadline. The better of the two test scores will count towards your grade. No retests will be given after the unit retest deadline. Retests are arranged by appointments with your instructor, and Retests are taken in the WCC Testing Center in the Library.

To take a retest, all of the following must be met:
a) All problems from the Unit Exam at the end of the unit must be completed and turned in to the instructor.
b) The student must meet with the instructor to review mistakes made on the first form of the test taken.
c) Additional math activities as designated by the instructor must be completed.
d) The retest must be taken by the designated unit retest deadline.

4. Final Exam. The Final Exam will cover the concepts and skills in the entire course. The Final Exam is 1 hour, 50 minutes in length and will be scored on a 150-point scale. The student must achieve a minimum of 60% of the possible points for the final exam. Without this minimum requirement, a passing grade for the course is not possible. No retesting for the Final Exam is available unless the 60% minimum is not met and the 70% minimum per Unit Test was met. In that event, a retest of the Final Exam is possible, however, the maximum score is 60% of the possible points for the Final Exam.

Make-up. Make-up opportunity for a Unit Exam or Final Exam will be possible only upon a timely presentation of a serious and justified explanation of the student’s absence from the class test. The instructor has the right to request documentation of the student’s absence from the class and to determine if the absence from the class test is justified. A make-up test must be taken within one week of the in-class test unless otherwise specified by the instructor. No more than one exam may be taken by a student on a make-up basis.

5. Calculator use is not allowed on quizzes, tests and exams. However students may use calculators during homework assignments to speed up calculations.

6. Course Grade. Grades used are A, B, C, D, F, N or CR, NC. Students must request for CR/NC grading by the designated deadline (usually the same as the Withdrawal Deadline). Minimum competencies are expected of students. Each student must:
a. score at least 70% of the total points on each unit exam and
b. score at least 60% of the total points on the final exam.

Until these minimums are met, grades of A, B, C, D or CR cannot be assigned. In other words, if a student does not meet the two criteria above, they must obtain the F grade for the course, unless they are qualified for a N or NC grade. If there is only a small part of the minimum competencies that the student has not met, you may choose to give an I grade so that retesting opportunities, if still available, can be provided beyond the final exam period to allow the student to complete the course competencies.

If the student has achieved a minimum of 70% of the possible points for each unit test and a minimum of 60% of the possible points for the final exam, then a letter grade for the course will be assigned according to the level of achievement as provided in the table below:

Additional Information (may be part of an appendix)

Grading. To receive full credit for problems done on exams or graded homework, you must show sufficient work in a clear and organized manner. Your work must be neat and organized. "Messy" and/or disorganized work will not receive full credit.

Absences. It is your responsibility to attend class. If you are absent, you are responsible for any important announcements or assignments given during the class you missed. It is your responsibility to meet with your instructor to review any missed lecture material. You may drop in during posted office hours or make an appointment to meet one-on-one. Please do not send email requests for missed lecture material.

Disruptive Behavior. Please respect your fellow students and act accordingly. If a student takes part in disruptive behavior, the instructor reserves the right to exclude the student immediately from the class meeting.
## TENTATIVE SCHEDULE

**DONLIN – Spring 2017; TR 5:30 – 7:30 PM (CRN: 63520 & 69521)**

**Academic Calendar:** [http://windward.hawaii.edu/academics/Calendar/](http://windward.hawaii.edu/academics/Calendar/)

January 30 – Last Day for 100% Refund, Last Day to Withdraw without a "W" Grade
April 3 – Last Day to Withdraw with a "W" or Establish Credit/No-Credit and Audit Options

### Course Content

**Skills or Competencies/Responsibilities of Students**

Success in this course will be enhanced by:

1. a positive, inquiring attitude towards learning mathematics;
2. setting aside adequate time for studying and working of problems;
3. reading the text carefully and making use of other learning materials whenever necessary;
4. seeking assistance from the instructor and the Math Lab personnel whenever necessary;
5. completing assignments by the designated date;
6. regular class attendance, participation and maintaining accurate class notes.
Complete Course Content

2.3 – More on Solving Linear Equations
1) learn and use the four steps for solving a linear equation
2) solve equations with fractions or decimals as coefficients
3) solve equations with no solution or infinitely many solutions
4) write expressions for two related unknown quantities

2.4 – An Introduction to Applications of Linear Equations
1) learn the six steps for solving applied problems
2) solve problems involving unknown numbers
3) solve problems involving sums of quantities
2.5 – Formulas and Additional Applications from Geometry
2) use a formula to solve an applied problem
4) solve a formula for a specified variable

2.6 – Ratio, Proportion, and Percent
1) write ratios
2) solve proportions
3) solve applied problems by using proportions
4) find percents and percentages

2.7 – Further Applications of Linear Equations
1) using percent in solving problems involving rates
2) solve problems involving mixtures
3) solve problems involving simple interest
5) solve problems involving distance, rate, and time

2.8 – Solving Linear Equalities
1) graph intervals on a number line
2) use the addition property of inequality
3) use the multiplication property of inequality
4) solve linear inequalities by using both properties of inequality
6) solve linear inequalities with three parts

3.1 – Linear Equations in Two Variables; The Rectangular Coordinate System
1) interpret graphs
2) write a solution as an ordered pair
3) decide whether a given ordered pair is a solution of a given equation
4) complete ordered pairs for a given equation
5) complete a table of values
6) plot ordered pairs

3.2 – Graphing Linear Equations in Two Variables
1) Graph linear equations by plotting ordered pairs
2) find intercepts
3) graph linear equations of the form $Ax+By=0$
4) graph linear equations of the form $y=k$ or $x=k$
5) use a linear equation to model data

3.3 – The Slope of a Line
1) find the slope of a line, given two points
2) find the slope from the equation of a line
3) use slopes to determine whether two lines are parallel, perpendicular, or neither

3.4 – Writing and Graphing Equations of Lines
1) use the slope-intercept form of the equation of a line
2) graph a line by using its slope and a point on the line
3) write an equation of a line by using its slope and any point on the line
4) write an equation of a line by using two points on the line

3.5 – Graphing Linear Inequalities in Two Variables
1) graph linear inequalities in two variables
2) graph an inequality with a boundary line through the origin

3.6 – Introduction to Functions
2) Understand the definition of a function
5) use function notation

4.1 – Solving Systems of Linear Equations by Graphing
1) decide whether a given ordered pair is a solution of a system
2) solve linear systems by graphing
3) solve special systems by graphing
4) identify special systems without graphing

4.2 – Solving Systems of Linear Equations by Substitution
1) solve linear systems by substitution
2) solve special systems by substitution
3) solve linear systems with fractions and decimals by substitution

4.3 – Solving Systems of Linear Equations by Elimination
1) solve linear systems by elimination
2) multiply when using the elimination method
3) use an alternative method to find the second value in a solution
4) solve special systems by elimination

4.4 – Applications of Linear Systems
2) solve problems about quantities and their costs
3) solve problems about mixtures
4) solve problems about distance, rate (or speed), and time

5.1 – The Product Rule and Power Rules for Exponents
1) use exponents
2) use product rule for exponents
3) use the rule \((a^m)^n = a^{mn}\)
4) use the rule \((ab)^m = a^m b^m\)
5) use the rule \((a/b)^m = (a^m)/(b^m)\)
6) use combinations of rules

5.2 – Integer Exponents and the Quotient Rule
1) use 0 as an exponent
2) use negative numbers as exponents
3) use the quotient rule for exponents
4) use combinations of rules

5.3 – An Application of Exponents: Scientific Notation
1) express numbers in scientific notation
2) convert numbers in scientific notation to numbers without exponents
3) use scientific notation in calculations

5.4 – Adding and Subtracting Polynomials; Graphing Simple Polynomials
1) identify terms and coefficients
2) add like terms
3) know the vocabulary for polynomials
4) evaluate polynomials
5) add and subtract polynomials
5.5 – Multiplying Polynomials
1) multiply a monomial and a polynomial
2) multiply two polynomials
3) multiply binomials by the foil method
5.7 – Dividing Polynomials
1) divide a polynomial by a monomial
2) divide a polynomial by a polynomial

6.1 – The Greatest Common Factor; Factoring by Grouping
1) find the greatest common factor of a list of polynomials
2) factor out the greatest common factor
3) factor by grouping

6.2 – Factoring Trinomials
1) factor trinomials with a coefficient of 1 for the second-degree term
2) factor such trinomials after factoring out the greatest common factor

6.3 – More on Factoring Trinomials
1) factor trinomials by grouping when the coefficient of the second-degree term is not 1
2) factor trinomials using the foil method

6.4 – Special Factoring Techniques
1) factor a difference of squares
2) factor a perfect square trinomial

6.5 – Solving Quadratic Equations by Factoring
1) solve quadratic equations by factoring
2) solve other equations by factoring

6.6 – Applications of Quadratic Equations
1) solve problems involving geometric figures
2) solving problems involving consecutive integers
3) solve problems by applying the Pythagorean Theorem

7.1 – The Fundamental Property of Rational Expressions
2) find the values of the variable for which a rational expression is undefined
3) write rational expressions in lowest terms
4) recognize equivalent forms of rational expressions

7.2 – Multiplying and Dividing Rational Expressions
1) multiply rational expressions
2) divide rational expressions

7.4 – Adding and Subtracting Rational Expressions (incorporate 7.3 – LCD)
1) add rational expressions having the same denominator
2) add rational expressions having different denominators
3) subtract rational expressions

7.5 – Complex Fractions
1) simplify a complex fraction by writing it as a division problem (Method 1)
2) simplify a complex fraction by multiplying numerator and denominator by the LCD (Method 2)

7.6 – Solving Equations with Rational Expressions
1) distinguish between operations with rational expressions and equations with terms that are rational expressions
2) solve equations with rational expressions

7.7 – Applications of Rational Expressions
2) solve problems about distance, rate, and time  
3) solve problems about work

-----------------------------

8.1 – Evaluating Roots
1) find square roots
2) decide whether a given root is rational, irrational, or not a real number
4) use the Pythagorean Theorem
5) use the distance formula
6) find cube, fourth, and other roots

8.2 – Multiplying, Dividing, and Simplifying Radicals
1) multiply square root radicals
2) simplify radicals by using the product rule
3) simplify radicals by using the quotient rule
4) simplify radicals involving variables
5) simplify other roots

8.3 – Adding and Subtracting Radicals
1) add and subtract radicals
2) simplify radical sums and differences
3) simplify more complicated radical expressions

8.4 – Rationalizing the Denominator
1) rationalize denominators with square roots
2) write radicals in simplified forms
3) rationalize denominators with cube roots

8.5 – More Simplifying and Operations with Radicals
1) simplify products of radical expressions
2) use conjugates to rationalize denominators of radical expressions
3) write radical expressions with quotients in lowest terms

8.6 – Solving Equations with Radicals
1) solve radical equations having square root radicals
2) identify equations with no solutions
3) solve equations by squaring a binomial
4) solve radical equations having cube root radicals

8.7 – Using Rational Numbers as Exponents
1) define and use expressions of the form $a^{\frac{m}{n}}$
2) define and use expressions of the form $a^m^n$
3) apply the rules for exponents using rational exponents
4) use rational exponents to simplify radicals

9.1 – Solving Quadratic Equations by the Square Root Property
1) review the zero-factor property
2) solve equations of the form $x^2 = k^2$, where $k > 0$
3) solve the equations of the form $(ax+b)^2 = k$, where $k > 0$

9.3 – Solving Quadratic Equations by the Quadratic Formula
1) identify the values of $a$, $b$, and $c$ in a quadratic equations
2) use the quadratic formula to solve quadratic equations
3) solve quadratic equations with only one solution
4) solve quadratic equations with fractions

9.5 – More on Graphing Quadratic Equations; Quadratic Functions
1) graph quadratic equations of the form $y = ax^2 + bx + c$ ($a \neq 0$)
